How to use the Dynamic Link Interface (DLI) – Duration: 2:56. You can easily access the dynamic link interface (DLI) menu and information on a disk or network shared by another program from a computer program, an application, or a page you've created. Get More Info. The Dynamic Link Interface is an important part of how Flash programming works. It allows a computer program to read information about a disk or network shared by another program. Q: What is the best way to get the end of the week in Python? I am trying to get the end of the week from a date. I am

using import datetime df = pd.read_csv('C:/Users/Adriana/Desktop/DF.csv') df['Week End'] = df.apply(lambda row: str(datetime.date.today().isocalendar()[1] - row['date'].isocalendar()[1]), axis = 1) But it is not working. And I keep getting this error: TypeError: 'Timestamp' object is not callable I have tried changing the date from datetime.date.today() to datetime.date() A: After your clarification I understood you want something like: import pandas as pd # read file with csv data df = pd.read_csv("C:/Users/Adriana/Desktop/DF.csv", parse_dates=["date"]) # convert date column to datetime df["date"] = 82157476af
